2.7L DOHC EcoBoost V6 Service Engine Bronco

Key Features & Benefits

Vacuum-actuated parallel twin turbochargers are water-cooled to prevent carbon buildup, also called "coking"

Integrated exhaust manifolds place the turbochargers closer to the exhaust ports for enhanced responsiveness

Reverse cooling system helps lower the exhaust temperature at the turbochargers, contributing up to 18 psi of available boost

Cast-iron camshafts

Fracture-split main-bearing caps create a superior fit between the cap and engine block for reduced crankshaft friction to help enhance operating efficiency

Piston connecting rods use an offset I-beam that provides strength to manage peak engine power levels while reducing weight for better responsiveness

Inter-cooler reduces incoming air temperature

Lightweight, durable composite intake manifold

Smart Charge Alternator

Compacted graphite iron (CGI)/aluminum block enables engine length reduction, high load-carrying capability and excellent crankcase breathing

Saves weight while providing strength where it's needed most for durability

Variable displacement oil pump reduces internal engine friction to enhance operating efficiency

Precisely controls the amount of oil delivered during all driving conditions
